Reasons for Allowance

4. The following is an examiner's statement of reasons for allowance of claims .

For independent claims 2 and 8, the prior art of record does not disclose or clearly suggest a an electronic instrument having a component susceptible to magnetization wherein a magnetic sensor to output a signal corresponding to a direction of a magnetic field that is arranged in an arbitrary position on a straight line passing the center of said component such that said straight

line and a detection axis of magnetism coincide in combination with the remaining limitations of the respective claim.

For independent claims 3 and 9, the prior art of record does not disclose or clearly suggest a an electronic instrument having a component susceptible to magnetization wherein an X axis magnetic sensor to detect a magnetic field component in an X axis direction that is arranged in an arbitrary position in a distance within the area of approximately $2^{-1/2}$ of the radius from the center of said component, or is arranged such that a detection axis of said magnetic sensor overlaps an X axis passing through the center of said component in an arbitrary position on said X axis or on its extended line and a Y axis magnetic sensor that is arranged such that a detection axis of the magnetic sensor overlaps an Y axis passing through said component and perpendicular to said X axis in combination with the remaining limitations of the respective claim.

Claims 5, 6, 11, 12, 15, 18 and 20-24 are allowed due to their dependency on the allowed independent parent claim.
